ACADEMIC PROJECTS

AI-Powered Resume Builder (https://github.com/harshad4558/ai-resume-builder)

- Developed a full-stack AI Resume Builder web application that generates personalized resumes based on user inputs using OpenAI's language model.
- Implemented dynamic form fields to collect user data such as education, experience, and skills, and generated ATS-friendly resumes in real-time.
- Integrated OpenAI API to create well-structured and keyword-optimized content for summary, job descriptions, and skills sections.
- Enabled users to preview, edit, and download resumes in PDF ,Word, text , format.

Sustainable Transportation Hub – Web Platform (https://github.com/harshad4558/sth)

- Built a full-stack web platform promoting eco-friendly travel by integrating real-time tracking of EV, cycle, and public transport stations using Leaflet.js.
- Implemented features like route suggestions, station availability indicators, and category filters to enhance user decision-making for sustainable commuting
- Designed intuitive user interface using React and Tailwind CSS to display nearby transportation options based on live geolocation data.

INTERESTS, HOBBIES

- Exploring AI tools and new technologies
- Driving Car
